

Cloud Security Architect Roadmap (6–12 Months)

Overview

This roadmap is designed for professionals with Linux and Azure experience aiming to transition into Cloud Security Architect roles with ethical hacking knowledge.

Programming Language: Python

- 1 Basics: variables, loops, functions, lists
- 2 File handling: CSV, JSON
- 3 API handling using requests
- 4 Regex for log parsing
- 5 Automation scripts and subprocess usage
- 6 Azure automation using SDK and CLI

Secondary Language: Bash

- 1 Variables, loops, functions
- 2 Log parsing using grep, awk, sed
- 3 Automation with cron jobs

Month 1–2: Foundations + Linux Security

- 1 Networking basics: TCP/IP, DNS, HTTP, TLS
- 2 Security basics: IAM, encryption, hashing
- 3 Linux security: SSH hardening, firewall, logs
- 4 Project: Linux Hardening

Month 3: Python Automation

- 1 Build security scripts: port scanner, log analyzer
- 2 Project: Security Automation Toolkit

Month 4–5: Azure Architecture + Security

- 1 Hub-spoke design, NSG, Firewall, Private endpoints
- 2 Entra ID, RBAC, Conditional Access
- 3 Project: Secure Azure Landing Zone

Month 6: Ethical Hacking Basics

- 1 OWASP Top 10
- 2 Burp Suite basics
- 3 Project: Web App Vulnerability Assessment

Month 7: Sentinel + SOC

- 1 KQL queries, detection rules
- 2 Project: Sentinel Detection Lab

Month 8: Defender for Cloud

- 1 Secure Score, recommendations
- 2 Project: Security Posture Improvement

Month 9: DevSecOps

- 1 CI/CD security, SAST, container scanning
- 2 Project: DevSecOps Pipeline

Month 10: Cloud Attacks

- 1 Misconfigurations, identity abuse
- 2 Project: Azure Security Scanner

Month 11: Multi-Cloud

- 1 AWS IAM, S3, GuardDuty
- 2 GCP IAM, Logging, KMS
- 3 Project: Multi-cloud comparison

Month 12: Portfolio + Certifications

- 1 Build GitHub portfolio
- 2 Certifications: Security+, SC-200, SC-100

Key Books

- 1 CompTIA Security+ Study Guide
- 2 Automate the Boring Stuff with Python
- 3 Linux Basics for Hackers
- 4 Security Engineering by Ross Anderson
- 5 Threat Modeling by Adam Shostack

Weekly Study Plan

- 1 2 hrs theory
- 2 2 hrs hands-on labs
- 3 2 hrs Azure security
- 4 2 hrs Python/Bash
- 5 1 hr documentation
